1 Deviations from the preregistration

Following discussions with the Editor and the Reviewers, we modified part of the analysis and slightly deviated from our preregistration. For transparency, we report here all the deviations from the preregistration.

Table S 1: Deviations from the preregistration

Topic	Deviation	Explanation
Moderation analyses for clinical and non-clinical samples	Not performed in the main paper but reported in supplementary.	The minimum number of k effects was not reached.
Robustness check	We performed a non-preregistered leave-one-out analysis to check the robustness of our findings.	Accepted reviewers' suggestion
Publication bias analysis	We performed non-preregistered PET regressions to test for possible publication bias in our data.	Accepted reviewers' suggestion
Correction for unreliability	We considered corrected and not (as preregistered) raw correlations coefficients for the meta-analysis	Accepted reviewers' suggestion

2 Comparisons with personality traits

Table S 2: Correspondence between character strengths and personality, and expected correlations with well-being and mental health

Character strength	Most correlated facet ¹	Corresponding broad trait	Expected r with well-being ²		Expected r with mental health ³	
Appreciation of beauty	Aesthetic Appreciation	HEXACO Openness	.16	.19	-.02	.06
Bravery	Aesthetics	Big 5 Openness				
	Social boldness	HEXACO Extraversion	.16	.46	-.02	.40
	Assertiveness	Big 5 Extraversion				
	Creativity	HEXACO Extraversion				
	Self-Consciousness	Big 5 Extraversion				
Creativity	Creativity	HEXACO Openness	.16	.19	-.02	.06
	Ideas	Big 5 Openness				
	Fantasy	Big 5 Openness				
Curiosity	Inquisitiveness	HEXACO Openness	.18	.48	-.02	.40
	Ideas	Big 5 Openness				
	Aesthetics	Big 5 Openness				
	Liveliness	HEXACO Extraversion				
Fairness	Altruism	HEXACO Interstitial scale	.25	.46	.23	.27
	Gentleness	HEXACO Agreeableness				
	Altruism	Big 5 Agreeableness				
	Angry Hostility	Big 5 Neuroticism				
Forgiveness	Compliance	Big 5 Agreeableness	.18	.25	.21	.23
	Forgivingness	HEXACO Agreeableness				
Gratitude	Sentimentality	HEXACO Agreeableness	.18	.48	.11	.40
		Agreeableness				

Character strength	Most correlated facet ¹	Corresponding broad trait	Expected r with well-being ²	Expected r with mental health ³
Honesty	Altruism	HEXACO Interstitial scale		
	Positive emotions	Big 5 Extraversion		
	Liveliness	HEXACO Extraversion		
	Warmth	Big Five Extraversion

	Warmth	Big 5 Extraversion		
	Gregariousness	Big 5 Extraversion		
	Gentleness	HEXACO Agreeableness		

Character strength	Most correlated facet ¹	Corresponding broad trait	Expected r with well-being ²	Expected r with mental health ³
Zest	Liveliness	HEXACO Extraversion	.36 .48	.22 .40
	Activity	Big Five Extraversion		
	Achieve Striving	Big 5 Conscientiousness		
	Depression	Big 5 Neuroticism		

Note. In bold are facets that have been found to be the best correlates in multiple samples.

¹ Based on NEO-PI-R and IPIP-NEO facets in McGrath (2020) and the NEO-PI-R facets in Nettle et al. (2011).

² Based on Anglim et al. (2020) and Pletzer et al. (2024).

³ Based on Pletzer et al. (2024) and Strickhouser et al. (2017). For example, appreciation of beauty was found to be most associated to the “Aesthetic Appreciation” and “Aesthetics” facets; correlations for well-being ranged from .16 to .19 depending on the meta-analysis, while correlations for mental health ranged from -.02 to .06.

Table S 3: Correspondence between character strengths and personality, expected and current correlations with well-being and mental health

Character strength	Broad trait	Exp. r well-being ²	\hat{r} well-being	Exp. r mental health ³	\hat{r} mental health

See the shiny app for additional info

11 Clinical and non-clinical samples

For what concerns clinical and non-clinical population, results for both well-being and mental health outcomes are mainly inconclusive. Indeed, although effects are generally higher in non-clinical populations, effects within clinical populations are extremely heterogeneous and significance tests not informative. The high heterogeneity of the findings, other than visually clear, is supported by the Q and tau statistics. According to these results, we did not proceed with further analysis of clinical populations.

Figure S 1: Well-being associations by population

Figure S 2: Mental health associations by population

N = total sample size; k = number of effects;

r = back-transformed meta-analytic correlation coefficient; se = standard error;

* CI = confidence intervals; PI = predicted intervals;

tau2 = total variance (between + within); I2 = percentage of variance due to heterogeneity;

Q = Q statistic; QM = Q test for the moderator analysis. See the shiny app for additional info

12 Robustness checks

12.1 Well-being

Figure FigureS1. Appreciation of beauty and well-being leave one out results

Figure FigureS2. Bravery and well-being leave one out results

Figure FigureS3. Creativity and well-being leave one out results

Figure FigureS4. Curiosity and well-being leave one out results

Figure FigureS5. Fairness and well-being leave one out results
